WiSpeak
WIRELESS PRO AUDIO
HELLO!

We introduce the new audio system that will revolutionize your business:

WiSpeak
WIRELESS PRO AUDIO

Goodbye interferences; Hello reliability! With the latest technology in wireless audio transmission.

Installed in minutes with the ability to change the loudspeaker position without worrying about any cabling.

Pair up to 24 loudspeakers with a single CORE unit. Using TUBE and CUBE's aux output you can duplicate coverage surface.

Ecler's Guarantee: A professional audio specialist with more than 50 years in the sector.

WiSpeak grip App: Manage the system and control the devices' volume independently from WiSpeak grip application.

CORE

Up to 500m² coverage with one transmitter device.

WiSpeak CORE is the transmitter device that communicates with all the receiver devices to create a WiSpeak wireless network, and takes the role of the Master Unit. Its main functions are to pair and send audio contents to all the receivers (TUBE, CUBE), keeping a stable communication with them, and send also individual configuration commands to each receiver if desired. Includes 3 audio inputs, one of them Bluetooth® class 1 (up to 25 meters range, maximum).

TUBE

This is a story not about lights, but about audio… Professional audio!
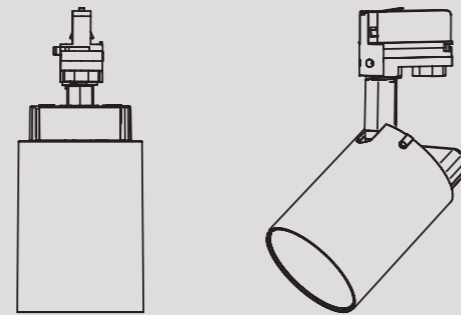

Available in black and white

WiSpeak TUBE is a self-powered 3" lamp style loudspeaker with wireless audio reception and control capabilities under the control of the Master unit, featuring an installation system which is compatible with ceiling light rails. Also can be installed on wall / ceiling with the optional TUBESMA accessory.
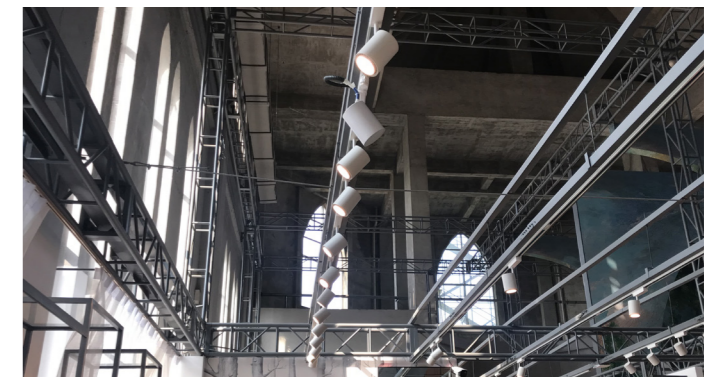

CUBE

Compact design, more power more versatility.
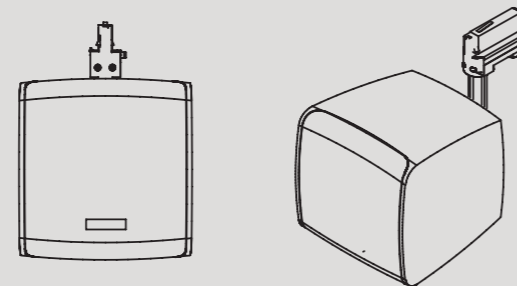

Available in black and white

WiSpeak CUBE is a self-powered 5" loudspeaker cabinet with wireless audio reception and control capabilities under the control of the Master unit, featuring an installation system which is compatible with ceiling light rails. Alternatively, wall mount or desktop installation is as well possible by means of the included accessories.
