INTRODUCTION

Senses and emotions. It is said that 83% of all commercial communication appeals only to one sense: our eyes. But 75% of our day-to-day emotions are influenced by what we smell, and there is a 65% chance of a mood change when exposed to positive sound. And emotions have a very big impact on our behaviour...

Music affects to our behaviour. The genre, loudness and tempo of music played have an effect on our perception of a place. In example, slow music played in restaurants results into a slower traffic flow. This means that slow music allows people to spend more time in a restaurant, potentially increasing sales. Furthermore if music pleases customer ears then it will create a positive emotional link with the venue.

Sound quality is also a very important fact on costumer's behaviour. A distorted sound, a lack of clarity on vocals, a poor low frequency response can lead into an unpleasant costumer's feeling. Excellent sound quality and proper music genre, level and tempo leads to well being.

If we talk about public address messaging then the most important issue is intelligibility. The clarity of a message is sometimes essential (i.e. emergency message).

In other situations (i.e. a seminar in a hotel) audio intelligibility becomes a key factor in the learning process. A professional audio system should fill a conference room with clear and even sound so every single listener understands every word of a speech. Moreover a good quality and well-designed sound system brings benefits not only to listeners but also to speakers. A well designed and balanced system reduces vocal strain and fatigue, overcomes background noise easily and improves conference room management by increasing efficiency. This reduces the need for repetition, reduces the likelihood of confusion and holds the listeners attention more effectively. There is a strong link between clear, well understood instructions and a listener ability to process, apply and retain them. Removing the barriers to effective learning should begin with the senses and our hearing plays a significant part in this.

For the reasons pointed above sound equipment technology should provide a well defined, clear and transparent sound.

Finally it must be said that each brand wants to be unique and to have a clear personality. Music content at a hotel or restaurant chain is a key fact to build this personality.

BENEFITS OF USING ECLER AUDIO SOLUTION

RELIABILITY

Only 0,7% return on warranty. One of the lowest of the industry. Almost fifty years of know-how in professional audio solutions

Reliability
Efficiency
Quality
Service

SOUND QUALITY

Using SPM Technology (Switching Power MOSFET) in audio amplification improves the sound experience. This patented technology has been chosen the best sound quality in the industry by the prestigious German magazine Production Partner

GIUGIARO DESIGN

AUDEO speaker cabinets have been designed by the famous Italian industrial designer Giugiaro (www.italdesign.it). Giugiaro has designed more than 200 cars in 40 years (Volkswagen, Fiat, Ferrari) as well as some other products for brands like Nikon, Motorola... AUDEO perfectly integrates in luxury venues

REMOTE CONTROL

Operation and maintenance of any venue in the world from a single point thanks to Ethernet management through EclerNet proprietary software

ERGONOMY

We can design your audio management screens as well as your customer ones. Can you imagine moving around with your i-pad and selecting your choices in a very friendly way?

GREEN

We save energy thanks to higher efficiency of SPM patented technology (74% efficiency against 50% efficiency of traditional bipolar transistor technology used by most of audio amplifier manufacturers). We use non contaminant components. All of them lead free. We recycle materials. 70% of our packaging is recycled. If NZA amplifiers are used we can save up to 61% energy in comparison with a standard amplifier

ENERGY CONSERVATION
EclerNet software allows the user to manage the system from a single point, reducing the number of devices and the energy consumption. The use of SPM technology allows the user to save up to 74% energy compared to traditional bipolar transistor technology.

HIGHER EFFICIENCY
EclerNet software allows the user to manage the system from a single point, reducing the number of devices and the energy consumption. The use of SPM technology allows the user to save up to 74% energy compared to traditional bipolar transistor technology.

ENERGY SAVING
EclerNet software allows the user to manage the system from a single point, reducing the number of devices and the energy consumption. The use of SPM technology allows the user to save up to 74% energy compared to traditional bipolar transistor technology.

NO CONTAMINANT COMPONENTS
EclerNet software allows the user to manage the system from a single point, reducing the number of devices and the energy consumption. The use of SPM technology allows the user to save up to 74% energy compared to traditional bipolar transistor technology.

RECYCLED MATERIAL
EclerNet software allows the user to manage the system from a single point, reducing the number of devices and the energy consumption. The use of SPM technology allows the user to save up to 74% energy compared to traditional bipolar transistor technology.
